(g) Credit Default Swaps - North American Untranching CDS Indices

Contract Description	<p>A credit default swap (CDS) is a derivative transaction that allows for one party to transfer to another party for an agreed period of time the credit risk associated with an index of reference entities (an Index CDS). In each CDS, one party (the Buyer) pays a cash premium (the Premium) to the other party (the Seller) to purchase credit protection against the occurrence of an adverse event (a Credit Event) with respect to the reference entity or entities.</p> <p>The most common Credit Events are bankruptcy, failure to pay obligations and restructuring of obligations. The credit protection can relate to a specific type of obligation or all obligations of a reference entity and is expressed in terms of a notional amount of the relevant obligations.</p> <p>Selling credit protection is economically equivalent to owning the relevant obligations. Buying credit protection is economically equivalent to selling those obligations short.</p> <p>If a Credit Event occurs before the maturity date of a CDS, the Seller must make a payment to the Buyer in accordance with the settlement terms of the CDS. In cash settlement, a cash payment is made by the Seller to the Buyer equal to par minus the recovery rate of the reference asset, with recovery rate being calculated by referencing dealer quotes or observable market prices over some period after default has occurred.</p> <p>Credit Events are determined by International Swaps and Derivatives Association, Inc. (ISDA) committees made up of market practitioners and settlement prices for obligations are determined by standardized auctions.</p>

Contract Description	<p>A credit default swap (CDS) is a derivative transaction that allows for one party to transfer to another party for an agreed period of time the credit risk associated with an index of reference entities (an Index CDS). In each CDS, one party (the Buyer) pays a cash premium (the Premium) to the other party (the Seller) to purchase credit protection against the occurrence of an adverse event (a Credit Event) with respect to the reference entity or entities.</p> <p>The most common Credit Events are bankruptcy, failure to pay obligations and restructuring of obligations. The credit protection can relate to a specific type of obligation or all obligations of a reference entity and is expressed in terms of a notional amount of the relevant obligations.</p> <p>Selling credit protection is economically equivalent to owning the relevant obligations. Buying credit protection is economically equivalent to selling those obligations short.</p> <p>If a Credit Event occurs before the maturity date of a CDS, the Seller must make a payment to the Buyer in accordance with the settlement terms of the CDS. In cash settlement, a cash payment is made by the Seller to the Buyer equal to par minus the recovery rate of the reference asset, with recovery rate being calculated by referencing dealer quotes or observable market prices over some period after default has occurred.</p> <p>Credit Events are determined by International Swaps and Derivatives Association, Inc. (ISDA) committees made up of market practitioners and settlement prices for obligations are determined by standardized auctions.</p>
